

6-7-8 Curriculum

Although we have started to outline our middle school thematic curriculum, we are still "filling in" the outline. We expect to offer to our most senior students a three-year course of study in the humanities, focusing on Eurasia, the Americas and S.Asia/Africa/China.

In the sciences, we expect the AAA resources to be one of our guides. Our themes will remain broad and generative, with study of evolution, chemistry, field life sciences, the human body, light and sound, electricity and magnetism, and physics.

Our math program will prepare PCS students to engage in rigorous high school mathematics. We expect to offer algebra and geometry beginning in the 6th grade so our students are prepared to study Algebra 2 as freshmen.

Our 6-7-8 program will also have an electives program, which we expect to be emergent, with recurring themes in, among other areas, architecture/construction, creative writing, music, history (with a focus on specific local themes), local botany and design.
